In the broadest sense, OPM3[®] is a maturity model. However, it is different from many other maturity models (such as the Capabilities Maturity Model - CMM) in that it defines a continuum of maturity as opposed to discrete maturity levels. The OPM3[®] tool, which may be purchased from the Project Management Institute (PMI) facilitates the assessment process through the use of embedded directories that analyze the industry best practices and capabilities that make up the best practices, as well as adherence to A Guide to the Project Management Body of Knowledge (PMBOK[®] Guide) guidelines to determine the domain's OPM infrastructure maturity level. Model implementation can be facilitated through the use of the OPM3[®] tool developed by the PMI. The model is implemented through a three-phase process: • Acquiring an understanding of the model and its implementation – Knowledge, • Comparing the current OPM infrastructure to a robust OPM infrastructure – Assessment, and • Determining which changes are feasible at the current time and implementing the noted changes – Improvement. Hence the initialism OPM3[®] was developed to represent the three-phase nature of the model. The tool also provides guidance for improvement selection. Successful implementation of an OPM3[®] program requires explicit buy-in by senior management, as they determine strategy and must provide insights into the objectives of the organization.
